

Celebrating a Year of Innovation

Welcome to the Embedded Technology Insider Q2 Edition

In this issue, we are celebrating the first half of 2019 with the launch of our newest innovations that help revolutionize the industries we serve. We are grateful for the opportunities to assist many leaders in our focused industries as well as help our rising star customers grow and gain market shares.

We have been putting our efforts on designing and developing more products that are solution-ready because we know that it will help ease project development burdens that our customers are often challenged with. We see the changes in the market and we create solutions that address the needs with flexibility and scalability that best suit our customers' applications. We have reorganized our teams to offer our customers specialized inventions and unique services. The scope of our OEM/ODM capabilities and offerings are enhanced and extended to better address our customers' vast and complex needs.

In this issue of our ETI newsletter, we would like to share examples of our inventions for some of our focused industries with you. We hope you find them an interesting read.

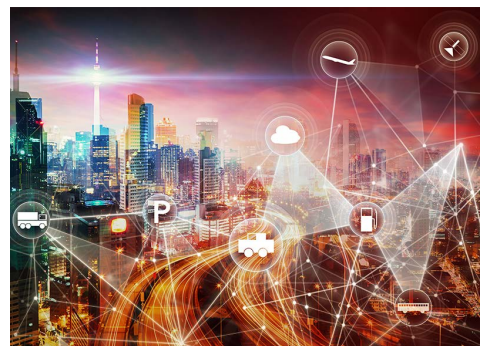

We look forward to continuing to help you and all of our customers reach unparalleled levels of success.

Axiomtek Team

Innovating the Connected Vehicle World

Axiomtek's Newest Secret "Agent" for Your Project's Quick Deployment

The increasingly IoT-driven transportation market - which includes connected cars, mass transit vehicles and truck fleets - can be a complex place for transportation systems integrators. There are many choices for both hardware and software for each unique project. Choosing the right hardware and software for the specific application may be challenging.

The secret of success is finding the right solution from the right provider, hardware and/or software, especially from the one that could offer assistance on both sides through its ecosystem with proven results with its compatibility and prior use cases.

Axiomtek's newest "Agent," the solutions and our ecosystem of technology partners can be the secret to your success. **[Read More](#)**

Keeping Our Commitment to Our Customer with Innovation

Axiomtek's Machine Vision System

Intelligent machine vision controllers have greatly enhanced the factory automation and robotics industries. They have led to a higher yield of products leaving the production line at faster speeds - while efficiently detecting and eliminating defective products. Autonomous picking robots equipped with machine vision, machine learning and AI capabilities are also utilized in warehouses to increase productivity and shorten deployment times.

Axiomtek's latest high performance machine vision controller, the IPS962-512-PoE, helps our customers meet the demanding requirements of high quality platforms in factory automation and robotics. [Read More](#)

Innovating Casino Gaming

Axiomtek's MotionDeck

Innovative computer technologies have allowed casino gaming to evolve and offer gaming machines with more immersive experiences to draw in and captivate players. Newer, improved models of casino gaming machines have shaped the possibilities of gaming revenue expansion and substantial growth for the market.

With Axiomtek's feature-rich Motion Deck TFT LCD touch screen solution and its value-added features, casino gaming equipment makers are able to design spectacular gaming machines to offer to their customers and remain at the top of their industry. Find out why the MotionDeck is an attractive choice to casino gaming equipment manufacturers [here](#).
